

# Uggs

UGG™ Australia sells Water & Stain Repellent and Cleaner & Conditioner to help to prevent and/or remove/reduce stains. If your UGGs are starting to look a little ugly, dry cleaning is the safest and most effective way to clean spots and stains from your UGGs, renew the essential oils to the skins and make the fleece lining look and feel soft again. If you feel comfortable cleaning them at home, follow these steps to hand wash them:

Moisten sheepskin with clean, cold water; be sure to wet entire boot to avoid visible water lines.

Dilute the Cleaner & Conditioner product half and half with water and apply a small amount of diluted Cleaner & Conditioner to a clean wet sponge. It is important NOT to apply Cleaner & Conditioner directly onto UGGs (this could damage the sheepskin).

Gently scrub the whole boot. The delicate surface of sheepskin can be damaged by overly aggressive scrubbing.

Rinse clean with clean, cold water and wring out excess. Stuff boots lightly with paper towels (to hold shape) and air-dry naturally. DO NOT use a hair drier, dry near a heat vent or dry in direct sunlight.

Once your UGGs are dry, lightly brush with a soft suede/nubuck brush; brush in one direction only.

To deodorize and help soften the inside of your UGGs, use a mixture of 2 tsp. baking soda and 2 tsp. corn flour to deodorize and soften the inside of the boots. To add a scent, you can also add a few drops of an essential oil. Shake this mixture into your boots and let them stand overnight. Next day, shake out the excess.
